

ABSTRACT VOLTERRA RELATION

A. VISELTER AND S. KANTOROVITZ

ABSTRACT. The abstract Volterra relation is the relation $VD(S) \subseteq D(S)$, $SV - VS \subseteq V^2$, satisfied by a closed operator S and a bounded operator V over some complex Banach space X . Results of several articles of the second author are extended from the case of S bounded to the general case. These include results on similarity, quasi-affinity, C^n -classification, and growth of related semigroups.
